FOR IMMEDIATE RELEASE

HIGH QUALITY WORK = \$\$\$

Corpus Christi, Texas, October 1, 2010 – A Corpus Christi, Texas manufacturing business has achieved significant growth thanks to its dedication to quality work that not only stands out to their customers but also exceeds industry expectations. The company began in Corpus Christi, Texas over 25 years ago. The company has not yet spent its first dollar on advertising. Pat Frasier, owner of Alpha Integration Systems, Inc. states that he has always believed that if he focused his efforts on quality work at a fair price, then it would cause the business to grow. And in fact it has. At its Clarkwood Road location, Alpha Integration Systems, Inc. employees over 21 individuals and has plans to open their second location in the area in order to accommodate the growth.

Jerry Frasier says: "As a solution provider, we offer trendsetting approaches for wiring, innovative structural design and a unique quality assurance program that insures each job meets and exceeds the customer's needs and expectations. Moreover, we present our finished products in a manner that reflects the strengths of our quality workmanship and technology for all job sizes, thereby showing how the design determines the production process (Design Driven Manufacturing); how functional integration enables design freedom and cost reduction; and how the ability to design and manufacture highly individualized products promote the development of new business areas."

Individualized end products and sophisticated functional integration

Regardless of market segment, there is currently a demand for ever-increasing product customization. This is especially true for the petrochemical industry. The customer provides application-specific specifications for manufacturing. To ensure crucial precision and quality for the procedures, the following are required: a high repetitive accuracy of the manufacturing process, integrated software solutions for designing guides, and a proficient handling of customer-specific data and parts

Alpha Integration System's goal is to provide an economically acceptable method for the production of customized integrated controls. For that reason, intensive planning is necessary, and a number of factors need to be considered and seamlessly combined, among them customer-specific automated data handling and individual logistics. Most importantly, a procedure such as continuous quality control processes ensures the efficient production of customized systems.
